1 Change Proposal

In MSATS database sequences are used to generate primary keys for some tables. Some of these are also used as identifiers for transactions and other data exchanged between MSATS and participants via aseXML schema. Over the years three of these sequence numbers have grown substantially and may exceed the maximum size defined for them in the database. This may happen in not too distant future. The simple types in aseXML which correspond to these three database sequences are

1. CATSRequestIdentifier
2. CATSObjectionIdentifier
3. MDMActivityIdentifier

To address this impending event, it is necessary to do the following beforehand

1. Increase the size of these in MSATS database
2. Make the size of the above simple types same as the new sizes of the sequences

Out of the two above changes, the first has already been done in MSATS and the increased sequence sizes are in place since the last MSATS release (46.77, May-2011).

Now it is proposed that the above simple types be changed to increase their size to same as that of the corresponding sequences. This aseXML Schema Change Request (CR47) is being put up to make the necessary schema change.

It may kindly be noted that though this is being proposed as part of r29 change it is not intended to upgrade the supported schema in MSATS from current r25 to r29 immediately. Specifically, there are no plans to move to higher schema r29 during release 46.78 (due Nov 2011) or 46.79 (due May 2012). The impending tick-over of the MSATS database sequences is expected to happen only after that. The purpose of introducing the change is to provide sufficient lead time and notice to the market of an event which is not controllable and which will force the entire market to upgrade the schema, without exception, and without recourse to any stop gap solution such as transforms from one version to another.

As and when necessary, in MSATS, the migration to higher version of schema from the current supported version of r25, for this change plus any other change, will happen as per usual process of sending Market Notices and Market Consultation.

The change needed to the three simple types is described below.

- (1) Simple Type CATSRequestIdentifier :- Increase the max value allowed from 10 digits to 15 digits.
- (2) Simple Type CATSObjectionIdentifier :- Increase the max value allowed from 10 digits to 15 digits.
- (3) Simple Type MDMActivityIdentifier :- Increase the max value allowed from 10 digits to 15 digits.

1.1 Description of the proposed change

The proposed changes are listed in the following table.

Item#	Change Description	Change Type ¹
1	Modify Simple Types CATSRequestIdentifier CATSObjectionIdentifier MDMActivityIdentifier	Modify
2	Change the version attribute of the versioned types impacted by the above simple type changes.	Modify

Table 1-1, Proposed Changes

1.1.1 First change description

Increasing the maximum value allowed to for the three simple types from 10 digits to 15 digits.

1.2 Reason for Change

1. **First Change** :- The value of the elements defined by these simple types is derived in MSATS from database sequences. These sequences are going to exceed the max value restriction in not too distant future. Hence the change needs to be carried out before the restriction is exceeded.

1.3 Supplied Documents

1.3.1 Business process definition

1.3.1.1 First Change :- The changed types are use used to define identifier elements in a number of complex types which are versioned and are used in different transactions. They have been identified and listed in following sections.

1.3.2 Other

aseXML_r29.zip

1.4 Baseline Schema

The schema used as a basis for this proposal **aseXML_r28.zip**

¹ Change Type can be one of

- New
- Enhancement, or
- Bug Fix

2 Approval Proposal

2.1 Proposed Change #1²

2.1.1 Draft schema

Please refer to the draft schema mentioned above attached to this change request. The base schema is aseXML_r28 and the files as detailed in the next section have been changed.

2.1.2 Change log

The following changes have been implemented in this draft:

Chg #	Item #	Description of change	Filename
1	1,2	R29 namespace declaration and included files (r29 suffixes) This change is same as that needed for CR46	aseXML_r29.xsd
		New simple type: r29 This change is same as that needed for CR46	Events_r29.xsd
		Change the max value from 9999999999 to 999999999999999 (form 10 digits to 15 digits) for simple type MDMActivityIdentifier Change the version of attribute of complex type MeterDataResponse from type=r26, use=required to type=29, use=optional	MeterDataManagement_r29.xsd
		Change the max value from 9999999999 to 999999999999999 (form 10 digits to 15 digits) for simple types CATSRequestIdentifier and CATSObjectionIdentifier For the following complex types change the version attribute to type=r29, and make use=optional if currently use=required <ol style="list-style-type: none"> 1. CATSChangeRequest 2. CATSNotification 3. CATSObjectionRequest 4. CATSChangeResponse 5. CATSChangeWithdrawal 6. CATSObjectionWithdrawal 7. CATSDataRequest 8. CATSChangeAlert 9. CATSObjectionNotificationData 10. CATSObjectionResponse 11. CATSObjectionWithdrawal 	CustomerTransfer_r29.xsd
		For the following complex types change the version attribute to type=r29, and make use=optional if currently use=required <ol style="list-style-type: none"> 1. ElectricityCATSChangeRequestNMIMasterRow 	CATSTableReplication_r29.xsd

² This section may be repeated if more than one option is considered

		2. ElectricityCATSChangeRequestNMIDataStreamRow 3. ElectricityCATSChangeRequestNMIMeterRow 4. ElectricityCATSChangeRequestNMIMeterRegisterRow 5. CATSChangeResponseRow 6. CATSObjectionRow 7. CATSObjectionResponseRow 8. CATSObjectionRow 9. CATSObjectionResponseRow	

Table 2-1 Change Log

2.1.3 Schema change description

As detailed in section 1 above this CR is to change the following three simple types and the types impacted by them

- (1) Simple Type CATSRequestIdentifier :- Increase the max value allowed from 10 digits to 15 digits.
- (2) Simple Type CATSObjectionIdentifier :- Increase the max value allowed from 10 digits to 15 digits.
- (3) Simple Type MDMAActivityIdentifier :- Increase the max value allowed from 10 digits to 15 digits.

2.1.3.1 Schema file aseXML_r28.xsd

The changes are shown as mark up in red. Only relevant changed portions are shown.

```
<xsd:schema xmlns="urn:aseXML:r298" xmlns:xsd="http://www.w3.org/2001/XMLSchema"

2.1.4 Impact Summary

This table identifies the files, transactions and versioned types that are potentially impacted as the result of these changes, where:

- Modified types - is a full list of types changed by this Change Request
- Derived types – is a list of any types that are derived from a modified type, and are therefore also modified by default
- Versioned types affected – is a list of all versioned types that will need to have the version attribute updated as a result of this Change Request
- Transactions potentially affected – is a list of all transactions that contain a modified type, either directly or via a type substitution
- Schema files affected – is a list of schema files that will be changed in some way as a result of this Change Request.

Modified types	Derived types	Versioned types affected	Transactions potentially affected	Schema files affected
				aseXML_r28.xsd

2.1.5 Developer Test

2.1.5.1 Test Platforms

The new schema has been tested using the following platforms as advised by ASWG:

- XMLSpy 2010
- MSXML4 SP1, MSXML 6
- Xerces 2.2.1 and 2.9.1
-

2.1.5.2 Test Cases

The r29 changes for this CR (CR47) have been tested with the following sample files

CATSNotification_r29.xml

DataRequest_r29.xml

MeterDataResponseConsumption_r29.xml

ReplicationNotificationCATSChangeResponse_r29.xml

ReportRequestNewParticipantAccess_r29.xml

ReportResponseChangeManagement_r29.xml

3 Proposal Assessment

3.1 Test

The ASWG ensures that all recommended parsers on relevant platforms can successfully validate the proposed schema.

3.1.1 Test Platforms

Supplied samples have been tested using the following parsers:

- XMLSpy 2010 (XML Spy 2010 was used as XML Spy 2004 was unavailable)
- MSXML 4.0 SP1 (Schema was also validated using proposed MSXML 6.0)
- Xerces 2.2.1, (Schema was also validated using proposed Xerces 2.9.1)

3.1.2 Test Cases

Samples have been tested as per section 2.1.5.2

3.1.3 Test Results

<All OK... or note issues>

3.2 Conformance Report

The ASWG completes the conformance report validating each proposed new schema file against the published aseXML guidelines.

Schema Filename	Impacted by Item #	Conformance Details
-----------------	--------------------	---------------------

aseXML_r29.xsd	1,2	<Conforms... or note non-conformance>
Events_r29.xsd	1,2	
MeterDataManagement_r29.xsd	1,2	
CATSTableReplication_r29.xsd	1,2	
CustomerTransfer_r29.xsd	1,2	

Table 3-1, Change Proposal Conformance Details

4 Issue Register

This section describes any issues that have arisen and any modifications that are made to the original proposal during the Change Process

4.1 Status of Issues

Issue#	Item#	Description and Discussion	Status ³	Resolution
1	1			

Table 4-1, Issues list

5 Resolution

The ASWG votes for endorsement of the options identified in section 2, and the voting results are forwarded to AEMO for approval. When 75% of those ASWG members who voted endorse a specific option, this represents an ASWG Recommendation for that option. AEMO will not reject an ASWG Recommendation without first consulting with the ASWG.

5.1 ASWG Endorsement

The results of the ASWG vote are as follows:

Date of Vote: ??/??/????

Option	# Votes	% Vote
Option 1 (section 2.1)		
Option 2 (section 2.2)		
Option # (section 2.#)		
Abstained		
Total Members Present		

Table 5-1, ASWG Vote Results

³ Either 'Open' or 'Closed'
